MoReq2010 Aims

- Evolution of MoReq2
- Scalability
- Flexibility
- Decoupling of requirements
- Small core with more options
- Groundwork for interoperability
- Appeal to a wide variety of software
- Supplier assurance

Consultation Highlights

Pluggable Architecture

Where's my email?

Compliance But

Functional Requirement - Example

reference	functional requirement	function	entity	metadata	test
R3.4.20	<p>The ERMS must allow an electronic file to be closed by user roles.</p> <p>more</p>	U3.9	E3.12	M3.34 M3.35	T3.4p T3.17

Functions (for access and audit)

U3.9 = reference to a function available to user roles – “Close”

Entities

E3.12 = reference to an entity – “File”

Metadata

M3.34 = reference to an metadata element – “Closed by user”

M3.35 = reference to an metadata element – “Closed at datetime”

Tests

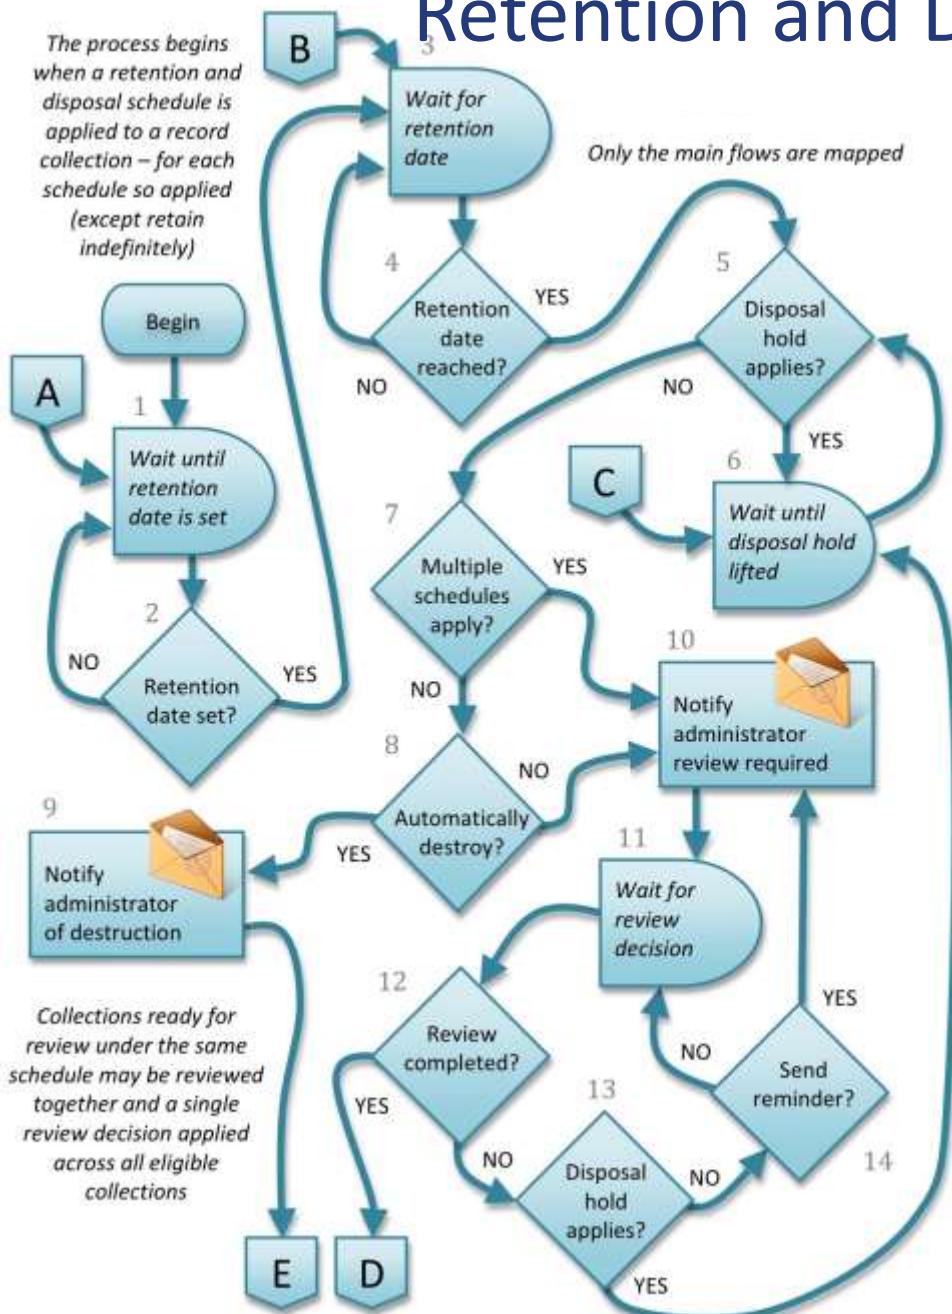

T3.4p = reference to a certification test – “p” indicates a partial test

T3.17 = reference to a certification test

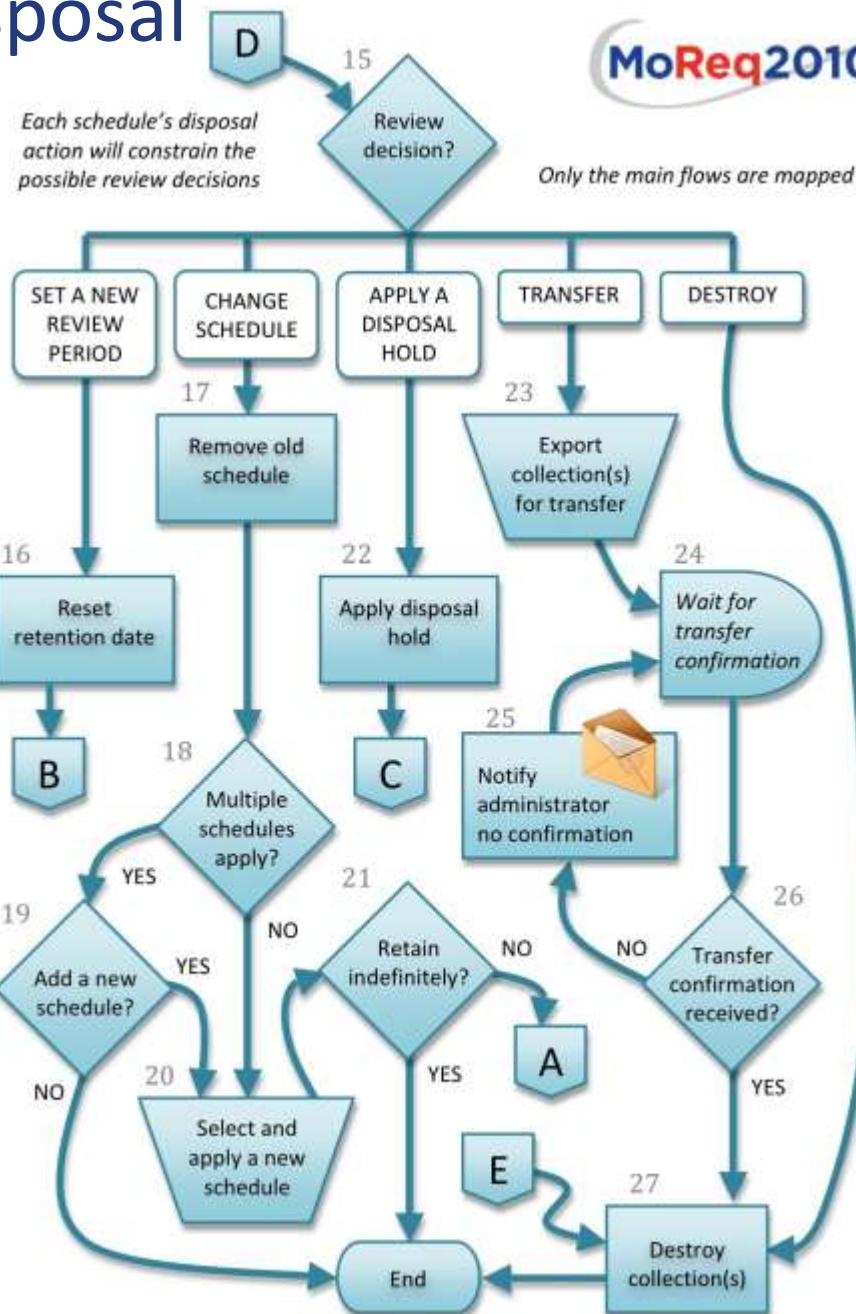

Retention and Disposal

The process begins when a retention and disposal schedule is applied to a record collection – for each schedule so applied (except retain indefinitely)

Retention and Disposal Process: Flow 1 of 2

Retention and Disposal Process: Flow 2 of 2
